

Savings for the Comfort of Your Home

Want to explore how you and your family use energy? These solutions give you insight into how you can reduce energy waste, increase comfort and create a sustainable future for our state.

Here's our short guide to both solutions:

Home Energy Analysis

Looking for fast energy efficiency solutions? Our free home energy analysis will help you start saving.

Comprehensive Home Assessment

Serious about saving energy and money? Our thorough in-home assessment could earn you up to \$4,000 in rebates.

Completed by	A Consumers Energy representative	Building Performance Institute-certified contractors
What's included in inspection	A trained analyst performs a visual inspection of your home, installs qualifying energy efficiency measures and shares a customized summary report with energy saving tips and recommendations for your home	Visual and diagnostic inspection of the home, including a blower door test; may also include an infrared camera test, a gas leak detector test and a combustion analyzer
Potential upgrades	Water pipe insulation, low-flow showerheads, LED lightbulbs, kitchen and bathroom faucet aerators, a programmable thermostat	Air sealing, attic and wall insulation, heating and cooling equipment, ductwork, lighting, appliances, water heating equipment and more
How long does it take?	About 90 minutes	2-4 hours
Customized report	A quick overview of simple energy saving opportunities	An in-depth report created with energy modeling software outlining inspection results, available rebates, health and safety findings and recommendations to help reduce energy waste and improve comfort
Incentives	Up to \$150 in annual energy savings	Up to 20% in annual energy savings, plus exclusive rebates up to \$4,000 on eligible upgrades
Price	Free	About \$250-\$400 (Varies by contractor and size of house)
