Residential Heating, Cooling and Water Heating Program **Customer Overview**

**Consumers Energy**

*Count on Us®*

## How Can I Get a Rebate From Consumers Energy?

When you buy energy efficient heating, cooling and water heating equipment through a participating contractor, you're eligible for rebates up to:

- \$50 for a heating or cooling comprehensive tune-up
- \$400 for a high efficiency natural gas furnace
- \$500 for a qualifying air conditioning system
- \$900 for a natural gas boiler

The savings continue even after you upgrade. If your electric heat pump, furnace or air conditioning unit is more than 15 years old, you can save up to 20% on heating and cooling costs with a high efficiency model.\*

## How Much Can I Save?

Your rebate amount depends on the type of equipment you install. The higher the efficiency, the bigger the rebate.

Want to maximize your savings? Make multiple purchases to combine rebates. For example, a Consumers Energy customer with combination natural gas and electric service could get a qualifying 97% AFUE natural gas furnace (\$400 rebate), a 21 SEER air conditioning system (\$500 rebate) and a Wi-Fi thermostat (\$100 rebate) for a total of \$1,000 in rebates!

For a complete list of rebates, visit [ConsumersEnergy.com/hvac](https://ConsumersEnergy.com/hvac)

## How Long Will It Take To Receive My Rebate?

Expect to receive your rebate from Consumers Energy within six to eight weeks of submitting an application. You can check the status of your rebate application by calling us at **866-234-0445** on weekdays from 8 a.m. to 8 p.m.

## The Participating Contractor Network

Heating and cooling contractors listed on [ConsumersEnergy.com/contractor](https://ConsumersEnergy.com/contractor) can submit an application for a rebate.

We provide participating contractors with extensive program training to ensure customers receive the best service. Participating contractors are licensed and trained in quality assurance, program requirements and application submission.

Participating contractors will ensure:

- Equipment is properly sized and installed to provide the efficiency and performance it was designed to deliver.
- Minimum equipment specifications have been met for rebate qualification.
- Rebate applications are submitted properly for efficient processing.

## Rebate Eligibility

You must be a Consumers Energy residential customer to receive rebates through this program. If you apply for a rebate on natural gas equipment, you must be a natural gas customer. If you apply for a rebate on electric equipment, you must be an electric customer. If you are a combination natural gas and electric customer, you are eligible for both natural gas and electric rebates. Equipment must meet program eligibility guidelines, which can be found at [ConsumersEnergy.com/hvac](https://ConsumersEnergy.com/hvac)
