

# CENTRAL AIR CONDITIONER TUNE-UP SPECIFICATIONS

Consumers Energy is offering a \$50 rebate to customers who have a participating contractor perform comprehensive tune-up services on their central air conditioner. Regular maintenance and tune-ups can help a system run more efficiently, last longer and improve homeowner comfort.

## **PARTICIPATION REQUIREMENTS**

Participating Trade Ally contractors must perform, at a minimum, the following test-in and test-out procedures and record the relevant information on the Central Air Conditioner Tune-Up Report. The protocol focuses on maximizing the thermodynamics capacity of the system and has the added benefit of identifying system improvements that are beyond the scope of regular maintenance. Work must be completed between April 1 and September 30, 2018.

## **STEPS TO BE COMPLETED:**

### 1. Perform test-in procedure:

- Drill access holes for a psychrometer to measure the conditions entering and leaving the coils, and install instruments. Let instruments stabilize while conducting the next test.
- Drill access holes for static pressure or anemometer airflow measurements and take measurements.
- Record airflow and psychrometric data.
- Measure and record system wattage.

### • Calculate coil capacity:

- a. If coil capacity is > 85 percent, perform maintenance procedures.
- b. If coil capacity is < 85 percent, perform maintenance procedures and make all possible airflow and charge adjustments to maximize the coil capacity and bring it to at least 85 percent.
  - Inspect filter, clean or replace standard filters
  - Clean condenser coil
  - Inspect evaporator coil, recommend cleaning as needed
  - Adjust airflow
  - Adjust refrigerant charge
  - Inspect electrical connections and wire

2. Measure and record system wattage again. (System wattage should change if airflow and charge are adjusted or if significantly dirty coils are cleaned.)

3. Record and calculate system effective efficiency for all units that were below 85 percent on the initial test-in procedure.

## CUSTOMER ELIGIBILITY

Incentives are available for separately metered, single-family homes or multifamily dwellings that contain up to four households. Tune-up services for multiple pieces of equipment at the same address may qualify for multiple incentives. Available for air-cooled residential equipment only; **geothermal products do not qualify for this incentive.** The program is available to Consumers Energy residential electric customers only. Only one rebate is available for each qualifying heating and cooling unit purchased or serviced.

## APPLICATION PROCESSING

**Participating Trade Ally contractors are responsible for completing the incentives application process on behalf of their customers.** All incentive applications for the program must be submitted online at **ConsumersHVAC.com**. Claims must be submitted for qualifying services provided during the season in which cooling equipment is in use, and within 30 days after service is performed. Service work performed outside of these dates does not qualify. Funding for this program is limited and available on a first-come, first-served basis. Applications must be accompanied by a completed customer invoice, Terms and Conditions form and the Central Air Conditioner Tune-Up Report.
